

Kamal El Sayyed

Senior Full-Stack Software Engineer | Backend, Cloud & AI

Profile

Full-stack engineer with 7 years of experience. I've worked across mobile, frontend, backend, cloud, and DevOps, and I've moved between them whenever the team needed it, so I'm used to picking up unfamiliar ground quickly. AI is now a normal part of how I build and review code, and I get value from it because I know the systems well enough to catch where it's wrong. Nothing goes out that I haven't read and understood, because I'm the one answerable for it, not the tool.

Experience

Cloudgate Consulting Senior Full Stack Developer

August 2022 – Present | USA / Canada (Remote)

Technologies

Python, FastAPI, GCP, AWS CDK, Terraform, DynamoDB, Datadog, Flutter, Claude Code, Gemini API.

Summary

Building outsourcing solutions in an Agile/Scrum setup with cross-functional teams. Clients include **TELUS Health** (health technology, 10,000+ employees across Canada, the US, and Australia) and **Fennel** (an investing app that turns ESG and shareholder data into something people can actually read).

Achievements

- Brought AI-assisted development into the team's daily work with **Claude Code** and custom **CLAUDE.md** rule files, so the assistant writes, refactors, and reviews code against our own standards instead of generic output. Also handles error debugging through log-based investigation.
- Built an AI log-triage workflow: it picks up ERROR-severity events from **GCP** logs, asks **Gemini** whether it is a real problem or noise, then opens a **Jira** ticket and starts the investigation. Removed most of the manual triage and cut the time it takes us to react to unexpected errors.
- Added an AI decision step to the production release pipeline that reads the change set and decides whether maintenance mode is needed before deploying, so releases stop waiting on a manual judgment call.
- Automated **Cloud Build** pipelines for infrastructure provisioning and put AI-assisted checks into **CI** code review, catching problems before a human reviewer sees them.
- Moved legacy REST integrations to an **event-driven architecture** after using AI-assisted analysis to map the existing integration patterns (**Trafix**, **Stripe**, **Apex**), and added a WebSocket service for real-time updates with third-party systems.
- Integrated **Datadog** and used log-based tracing to find bottlenecks, reducing API response time by **20%**.
- Introduced **Infrastructure as Code** with **AWS CDK** (deployment time down **30%**, and far fewer differences between environments) and reworked the **GCP-Terraform** setup to cover both modern and legacy infrastructure, bringing manual work during deployment down to **5%**.

Info

Portfolio: kamalsayed98.github.io

Email: kamal.sayed16@gmail.com

Phone: +961 81 615 908

LinkedIn: [@kamal-el-sayyed](https://www.linkedin.com/in/@kamal-el-sayyed)

Location: Beirut, Lebanon

Skills

AI & LLMs: Claude Code & Claude Desktop, Gemini API, ChatGPT, prompt engineering, context engineering (CLAUDE.md rules), LLM API integration, AI-assisted code review, AI-driven log analysis

Languages: Python, Dart, C#, Bash scripting, Java, Swift

Frameworks: FastAPI, ASP.NET Core, Flutter, Unity, Android SDK, SwiftUI

Databases: SQL (MSSQL, PostgreSQL), NoSQL (Cloud Firestore, DynamoDB), GraphDB (Neo4j)

Cloud & DevOps: GCP, AWS, Azure, Terraform, AWS CDK, Docker, Cloud Build, CI/CD

Tools: Datadog, Firebase, Kong Gateway, Ansible, PagerDuty, Jira

Education

Bachelor's degree in Computer Science, **Lebanese University**.

October 2016 – August 2019

Languages

English – fluent

Arabic – native

A World Technologies Senior Software Engineer

August 2021 – August 2022 | Aley, Lebanon

Technologies

C#, .NET Core, SQL, PostgreSQL, and Azure.

Summary

Backend engineer in an Agile/Scrum team on **Matensa**, a financial social app that moved physical financial activity into digital processes: agreements, invoices, marketplace, reservations, ticketing, and cash-in/cash-out channels.

Achievements

- Set up a proper **development lifecycle** (task management, branching, code reviews, automated CI/CD triggers), which lifted both team output and code quality.
- Cut server-side latency by **10%** on legacy SQL-backed applications by adding server-side caching.
- Worked with third-party providers to integrate payment gateways, digital wallets, gift cards, Google Calendar APIs, and banking systems.
- Mocked third-party services so the full integration test suite could still run during outages, cutting test time by **50%** (20 minutes to 10).
- Raised automated unit test coverage above **85%**, which cut bugs reported by QA and users by **30–40%**.
- Added reporting dashboards by feeding internal query results into Zoho, giving the team clearer operational insight.

FinFirst Capital Mobile Developer

December 2020 – August 2021 | Kuwait (Remote)

Technologies

Dart, Flutter, Java, and Android SDK.

Summary

Worked on an application for bank loan applications at car dealerships.

Achievements

- Led a **team of 3 developers** through a full rebuild of the mobile app in **Flutter** for iOS and Android, delivered in **60%** less time than the original one-year, Android-only project.
- Restructured the codebase into modular libraries so the work could be reused on other projects, including **CarGet**, a proposal app for third-party clients.
- Added **ASR** (speech recognition) and **OCR** (text recognition) to the eKYC flow so customers could finish identity checks from their phone.

Quayo Mobility Solutions Full Stack Developer

September 2019 – October 2020 | Beirut, Lebanon

Technologies

C#, .NET Core, Dart, Flutter, MS SQL, DevExpress, and Firebase.

Achievements

- Built and launched e-commerce applications on my own in **3 countries** (Tunisia, Algeria, and Lebanon), owning both the frontend and the backend.
